EXECUTIVE SUMMARY

The preliminary assessment completed on this facility/site requires compiled information found within the various Division Files of this Agency's (IEPA) Divisions of Water, Air and Land Pollution Control and Public Water Supplies. Also utilized, with no information being found, were the Hazardous Waste Generator Report and the Hazardous Waste Data Management System. Conclusions on the impact of the facility on the population and/or environment through soil, air, groundwater and surface water depend on this information. A search of the various files and reports resulted in an absence of information regarding this particular facility.

The only information available on this facility is from an unnamed representative of the company, reached by telephone.

The plant has been out of service since 1980. It had a lagoon for process water storage and has since dried up. This plant was the producer of "Vanity Fair" paper products.

This facility is given a low priority, and a site inspection should be performed on an as time allows basis.
